

Steps for JDK 11 Installation on Windows

Step 1: Unzip Folder “*JDK11_MySQL_Installation_Softwares*” and

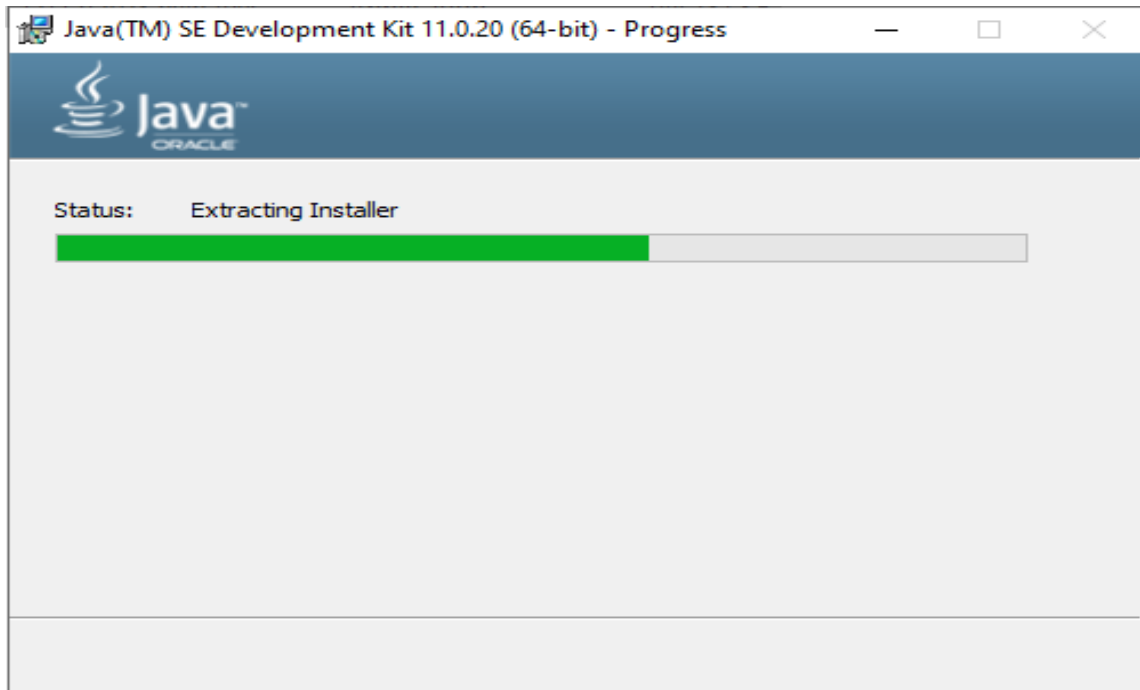

Double Click on *jdk-11.0.20_windows-x64_bin.exe* then below window will appear click on **Next to Continue**

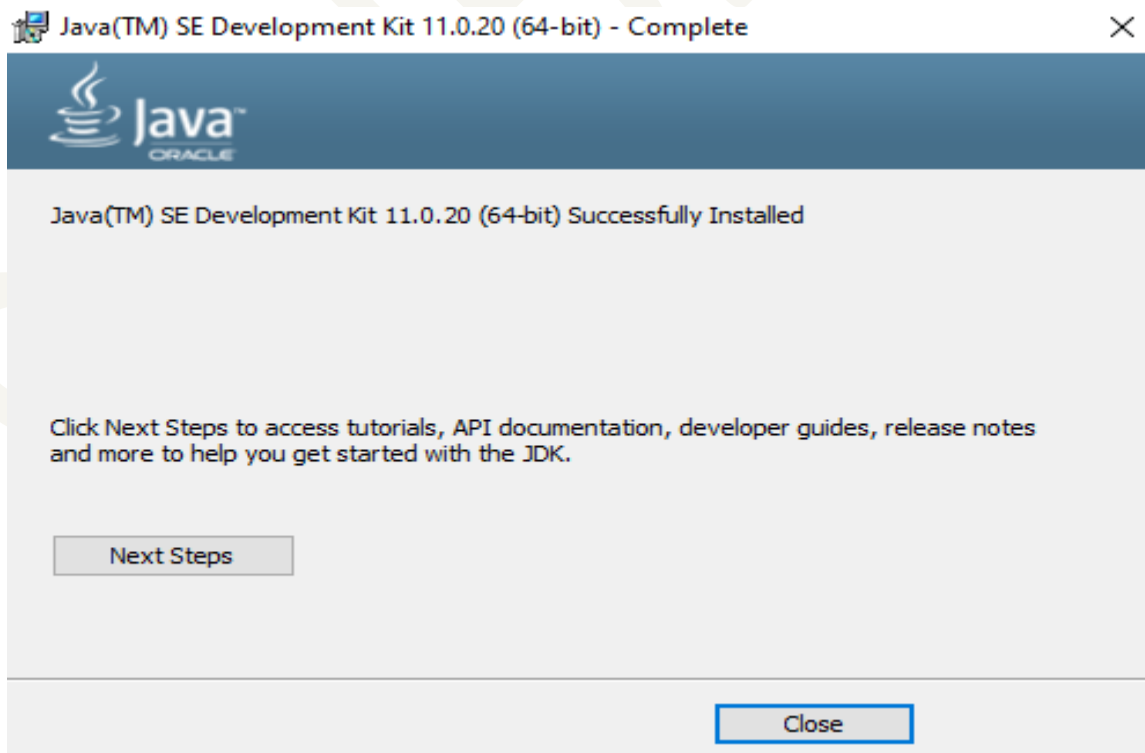

Step 2: Click on Next (do not change the Installation path)

Step 3: Wait for Extracting to complete

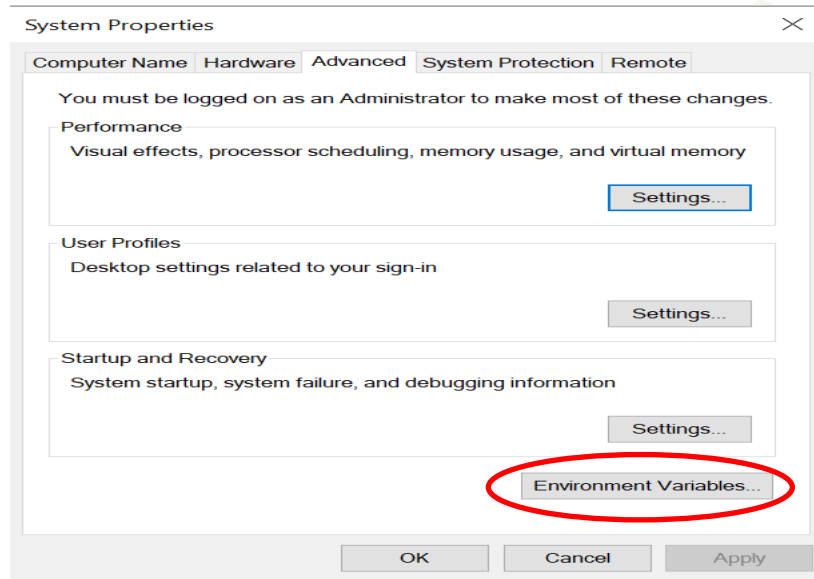

Step 4: Click on Close

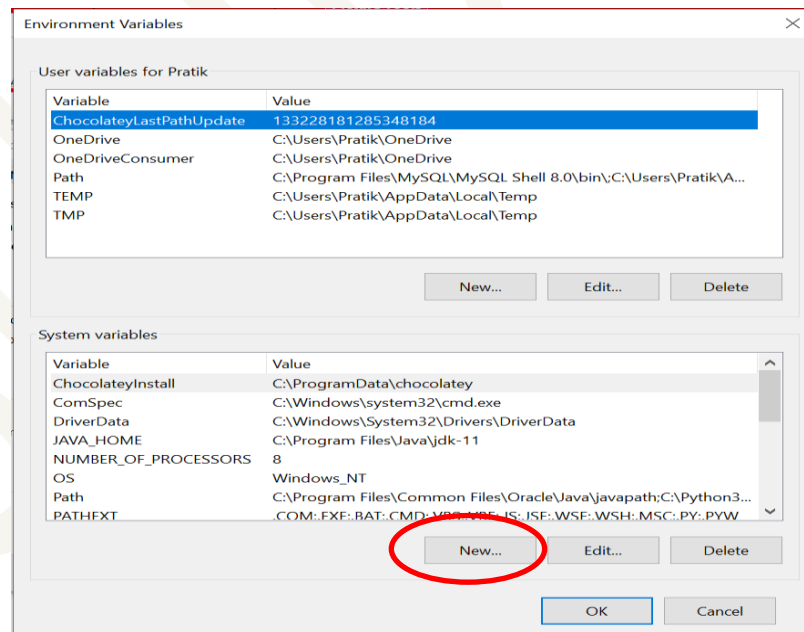

Steps to Set Environment Variable

Step 1: Goto **C:\Program Files\Java\jdk-11** folder and copy the path

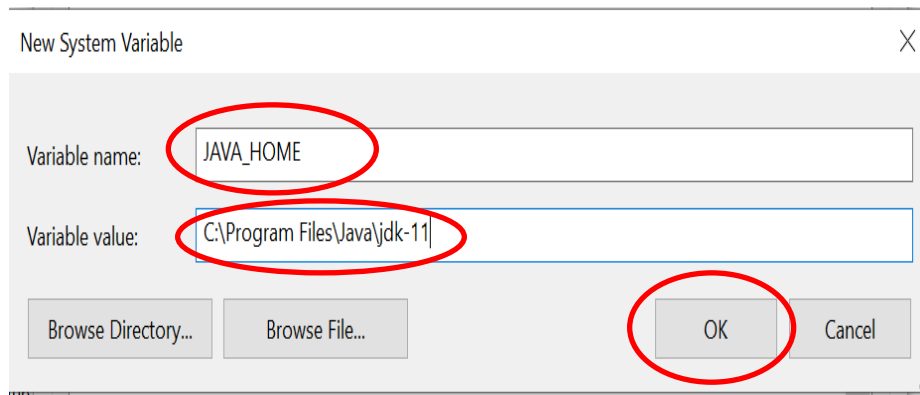

Step 2: In **Start Menu** search for **Environment variable**, you will see **“Edit the system environment variables”** option open it and then **click on Environment Variables**

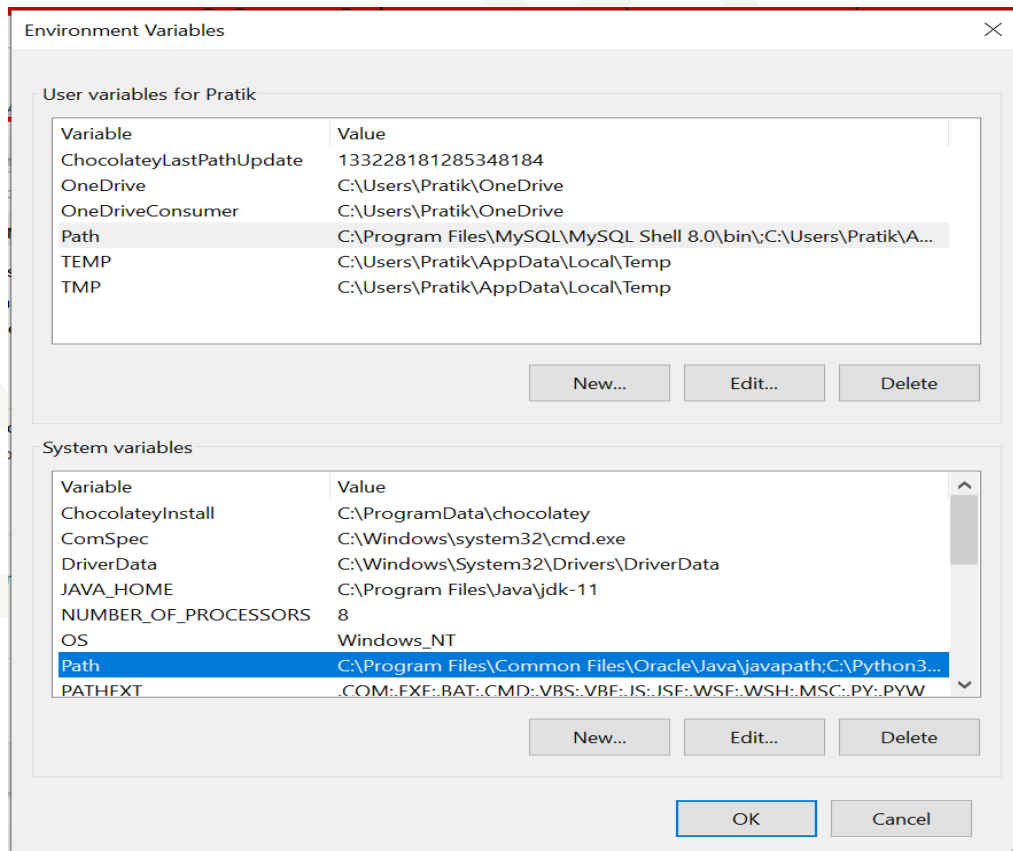

Step 3: Under **System Variable** click on **New button**

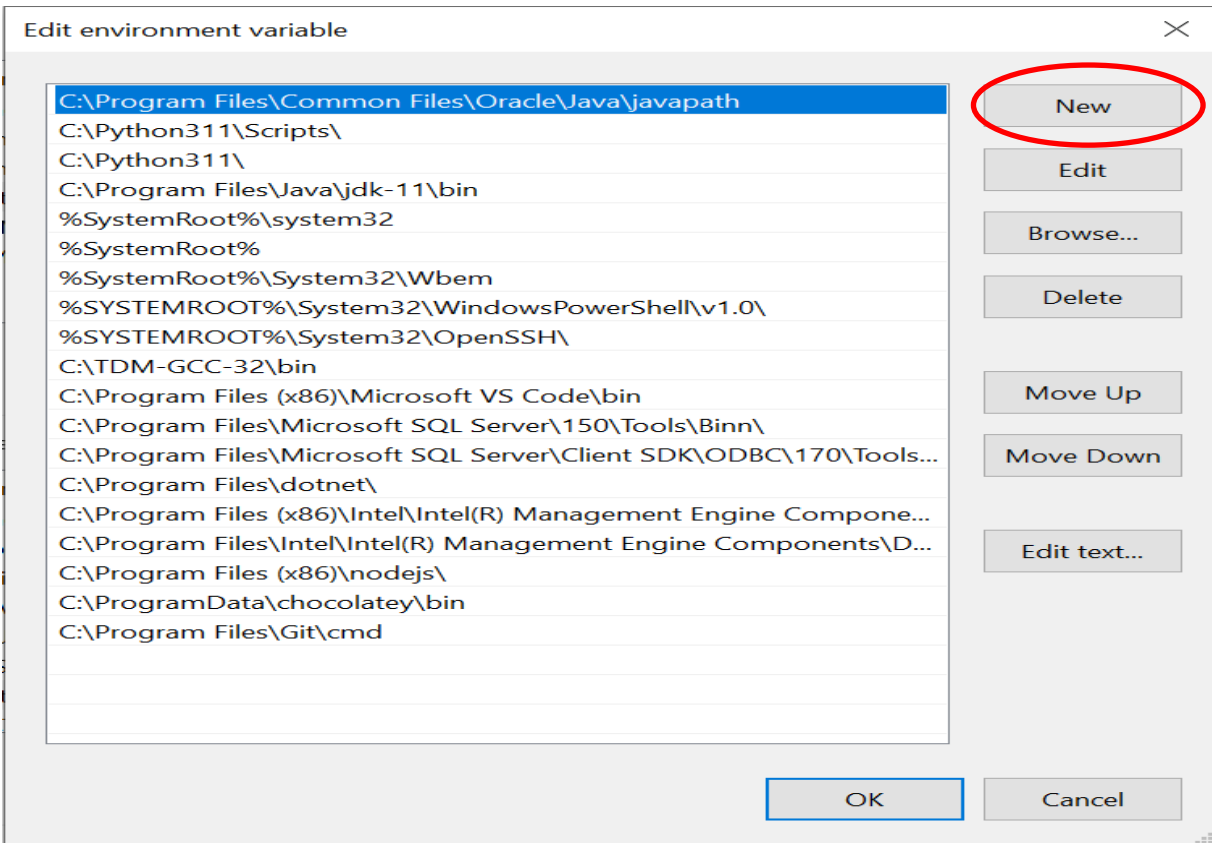

Step 4: Enter **Variable Name** as “**JAVA_HOME**” and **Variable Value** as “**C:\Program Files\Java\jdk-11**” and **click on OK**

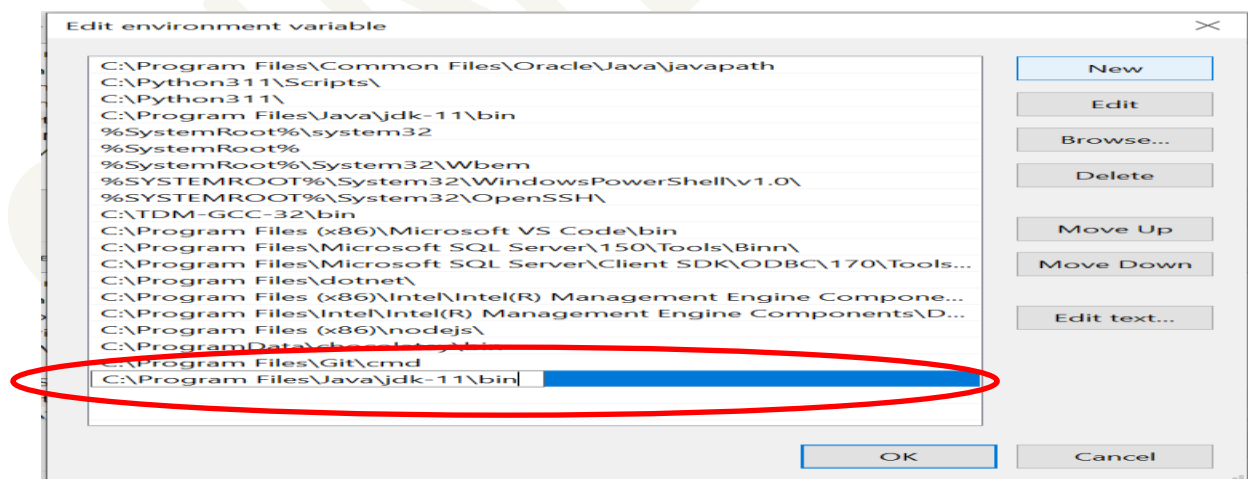

Step 5: Now **Goto C:\Program Files\Java\jdk-11\bin** folder and copy the path. Again **under System Variable** just single click on Path to select, as shown in below screenshot and **click on “Edit”** button

Step 6: Click on New button

Step 7: Paste the path which you have copied in step-5 as shown below and click on “OK” and continue clicking on “OK” to exit the environment variable windows

Step 8: Open command prompt and run command “java --version” in output you will see installed java version.
